體內水份 Body Water

身體總水重 (TBW) 是健康的量度指標。能清楚顯示身體水份比重，助你有效管理體重。

TBW is a good indicator of body health. A clear figure gives you a clear picture of your water weight and hydration percentage.

脂肪重 Body Fat

測量體內脂肪比重，有助監察及控制脂肪增減。

By offsetting the difference in total body water with total weight, it becomes possible to give an estimate for total body fat levels, an excellent tool for those watching their waistlines.

肌肉重 Muscle Mass

肌肉質量跟體內水份具有不同的電阻抗，能準確分開量度。

Total body and segmental muscle mass has different electrical impedance than that of water, allowing muscle mass to be calculated from impedance and height figures.

骨質重 Bone Mass

獨立量度骨質重量，清楚掌握骨質密度變化。

The weight of bone mass can be separated from total weight, giving you an all-round picture of your body composition.

全新電子磅系列

生物電阻測量分析技術 (BIA) Bioelectrical Impedance Analysis

生物電阻測量法就是利用少量電流通過人體，藉由測量電阻來決定身體組織和脂肪組織，計算出身體的脂肪比例和淨體組織比例，並可測量體內水份比重、脂肪重、肌肉重及骨質重。

Take control of your health with the German Pool All-Round Electronic Body Analyser Scale. By determining the opposition to the flow of an electric current through the body, the Body Analyser Scale makes it possible to calculate body composition, using an estimate of total body water (TBW).
